teens need 3 vaccines in addition to an annual flu vaccine

HERE’S WHAT U DON’T GET:
Tetanus, Diphtheria, Pertussis, Meningitis, Human Papillomavirus (HPV)
All are serious diseases that can cause symptoms and complications such as brain damage, severe scarring, amputation of limbs, fever, lockjaw, seizures, irregular heartbeat, difficulty breathing, kidney damage, genital warts, cancer and even death.

These diseases are preventable if teens receive 3 vaccines.
Tdap: 1 dose | MCV4: 2 doses | HPV: 2-3 doses

Get your vaccines so #UDontGetIt
